SUMMARY

Seeking a challenging position in reputable organization to expand and utilize my learning, skills, Experience and knowledge .

PROJECTS

1. **Hospital Manage System** :- This is my last year project where I can managed Receptionist, Doctors, Patients and Appointment data .Where I did use technology in back-end such as Python, Django, Mysql and in Front-end such as Html, css , JavaScript .

- Receptionist manage whole the data such as doctor , patient , receptionist Informations.
- Doctors only view that how many patients booked appointments.
- Patients will be booked our appointment through website as well as view that how many doctors are available .
- Appointment if booked then data inserted into the Unread page or if appointment viewed by doctors then data inserted into the Viewed Page.

2. **TODO APP :-**

- This project work only Crud Operations where I can managed CREATE, READ,UPDATE,DELETE data.
- Here I used technology Python,Django, Mysql and HTML, CSS only.

3. **Match Design Web Page :-**

- In this project we are used only Front-end where I can designed whole structure of View Match Score .
- Here I used technology HTML,CSS with Responsive Design .

4. **CRUD OPERATIONS :-**

- This is API Project I did developed a crud operations ,where I can managed particular employee data, where fill our data as form of user Information Data .
- Here I used technology such as Python , Django,MYSQL and Django Rest Framework for API Integrations .
